

COLOR WHEEL

CYBERSECURITY

Prasad Sawant

RED TEAM

The attackers

The Red Team acts as the malicious adversary, performing penetration tests, ethical hacking using guidelines like MITRE ATT&CK and OWASP Top 10.

Typical Roles:

- Penetration Testers
- Ethical Hackers
- Attack Simulations
- Security Consultants

BLUE TEAM

The defenders

Blue Team's role is to detect, respond to, and mitigate threats, ensuring that the organization's networks, data, and infrastructure are secure.

Typical Roles:

- SOC
- SIEM
- IDS/IPS
- EDR
- Incident Response
- Vulnerability Management

PURPLE TEAM

The collaborators

Purple Team is often a function or methodology designed to bridge the gap between offense and defense.

Typical Roles:

- Facilitate collaboration between Red and Blue teams
- Run joint exercises to improve detection and defense
- Share insights and lessons learned
- Continuous improvement of security controls and strategy

YELLOW TEAM

The builders

Yellow Team are the "builders" or "architects" who focus on secure software development and embedding security into the development lifecycle.

Typical Roles:

- Secure software development
- Incorporating security into the SDLC (Software Development Lifecycle)
- DevSecOps practices
- Threat modeling
- Secure coding standards and code reviews

WHITE TEAM

The referees

White Team ensures activities are safe, ethical, documented, and aligned with organizational policy, risk posture, and compliance requirements.

Typical Roles:

- GRC & Management.
- Managing risk assessment frameworks
- Overseeing compliance audits and reporting
- Establishing and maintaining security policies and procedures

ORANGE TEAM

The educators

Orange teams focus on the most unpredictable part of security which is people. They train, educate, and cultivate a security-first mindset within the organization

Typical Roles:

- IS Awareness Trainings
- Security Culture Building
- Phishing Simulations
- Educating users about policies

BLACK TEAM

The Physical Specialists

Black Teams operate purely as attacking teams under the Red Team umbrella but with a focus on covert physical operations.

Typical Roles:

- Social engineering and media drops
- Bypassing physical barriers and attacking door controls
- Surveillance and open source intelligence gathering
- Deployment of bugging devices
